

## Stream Box - Firmware Update

Install updated Stream Box firmware and get access to several optimizations for free, including FLAC Level Zero capability over Wi-Fi!

- New firmware Version 4.0.49.60 available! (4.0.48.60 for Stream Box DS)
- Now available over network with internet access
- How to perform the upgrade?
  1. In main menu, choose „Settings“
  2. Enter „General Settings“
  3. Enter „Software Update“
  4. New firmware will install automatically - Done!

News and benefits:

- Implemented improved support for high bitrate FLAC192/24 files (up to level Zero).
- Implemented network optimizations for higher throughput in Gigabit environments.
- Increased amount of available memory and processor power while playback for ultimate performance
- Aligned playback progress bar with better resolution and increased size of album art.
- Bigger album art in play view (no mirror effect)
- Fixed playback issue with AIFF- & WAV-Files controlled via UPnP

### Good news for current & future Stream Box owners!

We strongly believe, that streaming is the future of hi-fi stereo (beside analogue). With the new firmware, we successfully redeveloped the whole internal streamer processing and achieved a big improvement in overall performance and undisturbed listening pleasure, especially with highest resolution audio.

The new firmware transfers our Stream Boxes to the **first streamers in the world** which can play **FLAC files with 24bits / 192kHz level Zero** with maximum resolution over Wi-Fi networks!!! Due to superior stability, higher speed and improved data rate, high resolution audio files now can be listened to at maximum quality and with minimal chance for drop-outs.

Higher stability, faster overall performance and better connectivity can be achieved by using new, ultra-fast routers. The streamer now benefits from much more virtually memory capacity and more processing power due to internal memory optimizations. Additionally we improved size and visibility of the screen and the album covers (no mirror effect).

Watch out for new IOS 7 app (soon to be released) with many improvements ...
